Futures Trade Projections

FFTP — User Guide & Quick Reference

Generated: 2026-06-27 22:39 · Jachbit 2026

WHAT IS FFTP?

F.O.C.U.S. Futures Trade Projections (FFTP) is a free, browser-based planning tool for futures traders. It helps you project capital growth using a **conservative, disciplined contract scaling strategy** — you add exactly one contract for every starting-capital increment of profit you earn. No guessing, no over-leveraging, no emotion.

Your data is saved automatically in your own browser. Nobody else can see or overwrite it — each user keeps their own private copy.

HOW TO ACCESS

Open your web browser and go to:

<https://jachbit.github.io/FFTP>

Works on any device — desktop, laptop, tablet, or mobile phone. No app to install, no account to create, no login required.

THE GOLDEN RULE — CONTRACT SCALING

The core discipline of FFTP is simple and conservative:

RULE	DETAIL
Starting point	Begin with your chosen Starting Contracts at your Starting Capital. Default is 1 contract — e.g. 3 contracts at \$5,000.
When to add contracts	Each time your running equity grows by another Starting Capital increment of profit, add Starting Contracts more.
Maximum increment per week	Always one level only — even if a big week crosses multiple thresholds, only one upgrade fires per week.
Never skip levels	The app enforces this automatically — you earn each contract increment one step at a time.
Flexible scaling	Set Starting Contracts = 1 for the most conservative plan (+1 each upgrade). Set to 3 for faster scaling (+3 each upgrade). The discipline is the same either way.
Why?	Prevents over-leveraging during a hot streak. Capital growth is earned contract by contract, level by level.

Example A — Conservative: \$1,500 capital, Starting Contracts = 1 (MNQ, 16 pts/day)

Running Equity	Profit Earned	Contracts	Daily Profit @ \$2/pt
\$1,500	\$0	1	16 pts = \$32/day
\$3,000	\$1,500	2	16 pts = \$64/day
\$4,500	\$3,000	3	16 pts = \$96/day

\$6,000	\$4,500	4	16 pts = \$128/day
\$7,500	\$6,000	5	16 pts = \$160/day

THE SIX TABS

TAB	PURPOSE	KEY FEATURES
1 • Projection	52-week (or more) capital growth forecast	Equity curve · Contract scaling table · Weekend/holiday date logic · PDF & CSV export
2 • Trading Log	Record your real daily trades	Per-row P&L · Milestone alerts · Running equity tracker · PDF export
3 • Target Tables	Set your income goals by year	Daily & annual targets · Instrument values · Share sizing matrix · All editable
4 • US Trading Holidays	Full calendar of US market closures	10 CME/NYSE holidays for current + next year · Auto-calculated in JS · No API needed
5 • Basic Trading Plan	Pre-trade discipline checklist	5-section plan: Markets, Routine, Entry/Exit, Risk, Review · PDF export
6 • Disclaimer	Legal and educational notice	Educational purposes only · Not financial advice · Trade responsibly

TAB 1 — PROJECTION

Setup inputs (top bar):

- Instrument: choose MNQ/NQ (Nasdaq), MES/ES (S&P 500), or 5 other futures markets
- Contract Size: Micro or Mini
- Starting Capital (\$): your account size — also the profit increment that triggers a contract upgrade
- Risk % Per Day: shows your max daily risk in dollars and suggested points target
- Daily Points Target: how many points you aim to capture per trading day
- Plan Start Date: the date your plan begins. See **Weekly Schedule & Holiday Logic** section below.
- Starting Contracts: how many contracts to begin with (default 1). Each upgrade adds this same number.
- Trades / Week: how many trading days per week (1–5, default 5). Scales weekly profit and annual goal targets.
- Weeks to Project: default 52. Enter more for a longer roadmap — e.g. 104 for 2 years.

Risk Calculator strip:

Shows your dollar risk and equivalent points target. Click **Use This Target** to apply it instantly to the Daily Points field.

Projection table columns:

- Mo / Wk — month number and week number in plan
- Week Starting — the date that week begins (adjusted for weekends and holidays)
- Equity (Start) — account balance at the start of the week
- Contracts — how many contracts are active (▲ = upgrade week)
- Pts/Day · Pts/Week · Profit/Day · Weekly Profit — calculated from your inputs
- Equity (End) · % / Wk · % / Mo — end balance and return percentages

WEEKLY SCHEDULE & HOLIDAY CALENDAR LOGIC

FFTP automatically respects the US trading calendar — weekends and official US market holidays are excluded from your projection dates. No manual adjustment needed.

SCENARIO	WHAT HAPPENS	EXAMPLE
Start date on a Saturday or Sunday	Automatically advanced to the following Monday.	You pick Saturday July 5 → plan starts Monday July 7.
Start date Mon–Fri (not a holiday)	Respected exactly as chosen — your prerogative as the trader.	You pick Wednesday July 9 → Week 1 starts July 9.
Start date falls on a US market holiday	Advanced to the next trading day automatically.	You pick July 4 → plan starts July 7 (next trading day).
Week 2 and beyond	All subsequent weeks always start on Monday — clean weekly grid.	Week 1 = Wed July 9, Week 2 = Mon July 14, Week 3 = Mon July 21...
A Monday falls on a US holiday	Shifted to Tuesday (or next available trading day). Row is flagged with a building icon in the table.	MLK Day Monday → week starts Tuesday. Flag appears on that row.
Click any date to edit	You can override any individual week date manually if needed.	Click the date in the table — an inline date picker appears.

US Market Holidays recognized (CME / NYSE):

HOLIDAY	WHEN	HOLIDAY	WHEN
New Year's Day	Jan 1 (observed)	Independence Day	Jul 4 (observed)
MLK Jr. Day	3rd Monday in January	Labor Day	1st Monday in September
Presidents' Day	3rd Monday in February	Thanksgiving Day	4th Thursday in November
Good Friday	Friday before Easter Sunday	Christmas Day	Dec 25 (observed)
Memorial Day	Last Monday in May	Juneteenth	Jun 19 (observed)

Observed rules: If a holiday falls on Saturday, it is observed the prior Friday. If it falls on Sunday, it is observed the following Monday. Good Friday is calculated from Easter using the Butcher algorithm. The **US Trading Holidays** tab shows the full list for the current and next year.

TAB 2 — TRADING LOG

The Trading Log records what actually happened each day vs. your plan. It tracks your real running equity and tells you exactly when to size up.

Each log row contains:

- Date · No Trade checkbox · Instrument (all 14 contracts supported)
- Target Pts — your planned daily points
- Actual Pts — what you really captured (positive for wins, negative for losses)
- Contracts · Fees (\$) · Notes
- Gross P&L;, Net P&L;, and vs Plan calculated automatically per row

SCENARIO	WHAT TO ENTER	RESULT
Winning day	Enter a positive number in Actual Pts — e.g. +12	P&L; shown in green, added to running equity
Losing day	Enter a negative number in Actual Pts — e.g. -8	P&L; shown in red, deducted from running equity
No trade	Tick the No Trade checkbox	Row is greyed out, zero P&L;, equity unchanged

Milestone alerts:

A green banner appears after the trade row that pushed your running equity past the next \$startingCapital threshold — it tells you exactly how many contracts to move to.

TAB 3 — TARGET TABLES

Three editable reference tables to guide your long-term planning:

TABLE	COLUMNS / STRUCTURE	NOTES
Income Goals	Year · Daily Target (\$) · Annual Target (\$) · Age · Notes	Annual auto-calculates as Daily × 52 weeks × Trades/Week setting. Editable to override.
Instrument Values	Instrument · Tick (\$) · Point (\$) · # Ticks/Point · Notes	Reference sheet for all 14 supported futures contracts. All cells editable.
Stock Scalping Share Sizing	Matrix: Price Move (rows) × Shares (columns) = Profit (\$)	Add/remove rows and columns freely. PDF export available.

SUPPORTED INSTRUMENTS

MICRO	MINI	MICRO \$/PT	MINI \$/PT	MARKET
MNQ	NQ	\$2	\$20	Nasdaq 100
MES	ES	\$5	\$50	S&P 500
MGC	GC	\$10	\$100	Gold
M2K	RTY	\$5	\$50	Russell 2000
MYM	YM	\$1	\$5	Dow Jones
MCL	CL	\$100	\$1,000	Crude Oil
SIL	SI	\$500	\$5,000	Silver

Note: 10 Micros = 1 Mini for most instruments (MYM/YM is 5:1).

SAVING, EXPORTING & SHARING DATA

FEATURE	HOW TO USE	NOTES
Auto-Save	Always ON — happens automatically on every change	Badge in footer confirms it is active. Shows how many log rows are saved.
Clear Data	Click the red Clear button in the footer badge	A confirmation modal lists exactly what will be deleted. Export CSV first as a backup.
Export CSV	Click Export CSV on the Projection tab	Downloads a spreadsheet of your full projection table
Import CSV	Click Import CSV and select a previously exported file	Restores your projection on any device or browser
Export Log CSV	Click Export Log CSV on the Trading Log tab	Downloads all your trade log entries

PDF Export	Click Export PDF on any tab	Generates a white-background PDF: Projection, Log, Goals, Instruments, Share Sizing, or Trading Plan
Download User Guide	Click the orange button at the top-right of the header	Downloads this PDF documentation from GitHub — always the latest version

IMPORTANT NOTES

- Your data is **private to your own browser**. Other users cannot see or change it.
- If you clear your browser cache or use a different browser, your data will be lost — **Export CSV regularly**.
- **Never click Clear unless you intend to reset everything**. A confirmation modal will warn you first.
- To move your data to a new device: Export CSV on the old device, Import CSV on the new one.
- The projection is a **planning tool only** — actual results depend on your trading performance.
- Always trade within your risk parameters. Add contracts only after profits are confirmed.
- Weekend and holiday date skipping is automatic — you never need to adjust dates manually.
